Installation Instructions

Note: It is highly recommended a licensed technician be consulted prior to beginning installation of the turn signal relocation kit.

1. Remove the turn signals from the motorcycle. If the turn signals are mounted to the motorcycle with a single post standoff, a wing style standoff will need to be purchased. HD part number 68480-02 (It is highly recommended a licensed technician be consulted regarding your year motorcycle before beginning removal of the turn signals)
2. Install the relocation brackets and the license plate and frame to the license plate mount using the 1/4” SSBH bolts, flat washers and nylon lock nuts. The 5/16” x 3” bolt for step 3 will need to be placed into the rear hole of the relocation bracket prior to installation of the bracket onto the license plate mount. If not already done, the top holes in the license plate mount will need to be drilled. The brackets are located on the outside of the plastic license plate mount and under the license plate frame. See illustration
3. Install the turn signals to the relocation brackets using the 5/16” hex head bolts, (2) flat washers and (1) lock washer each. See Illustration. The wires will be routed through the front hole of the brackets. Reconnect the wires to the motorcycle. The wires must be properly secured under the fender to avoid any contact with the wheel.

You are now ready to install your EASY BRACKETS.
